Brisbane Functional Neurological Disorder Clinic

You have been diagnosed with a Functional Neurological Disorder and accepted to our service.

For those who participate in our program, our treatment team is committed to giving patients the highest standard of care, and to helping them achieve the best possible outcomes. Our multi-disciplinary treatment program is individually tailored to each patient's needs and requires active patient participation. Patients must bring to the program a willingness to work hard and an openness to learn new ways and then apply the principles they learn in the program to life at home.

A good level of understanding about FND can have a major impact on patient's outcomes so please **do read the information you are given by us** and get back to us with questions if you have any. Our multidisciplinary approach requires you to **attend all your referred (ie. physiotherapy, psychology, psychiatry) outpatient appointments you are booked in for** - you will be discharged entirely from our clinic if you fail to do so.

Thank you.

Dr Alexander Lehn
Neurologist
